

Webinar: What can we expect from the soon to be released, Brome RIM?

Join us for our webinar on **Tuesday September 19** when AHRI's Peter Newman asks CSIRO's Farming Systems Scientist **Rick Llewellyn** the tough questions on how a new tool can help farmers and advisers identify the most cost-effective weed management practices and strategies for Brome grass over multiple seasons.

Feat: Rick Llewellyn, CSIRO

Date: Tuesday, September 19, 2017

Time: 11:30 – 12:30 pm, AWST, 13:30 – 14.30 am AEST

Brome grass has become one of the most costly grass weeds in many major grain growing regions. In conjunction with AHRI, **CSIRO will shortly launch Brome RIM which** can help growers develop the most profitable strategies for managing **Brome grass populations. RIM is a computer-based decision support system to aid farmers and agronomists in** their weed management decisions. **Rick and Pete will** put some potential practices to the test as they work through **some realistic scenarios based on** recent work with many farmers who are battling brome. The results will show how the tool can inform **practice change** decisions and shed new light on some potential brome management combinations.

P.S. For more information about these webinars please contact Lisa Mayer at lisa.mayer@uwa.edu.au or phone **+8 6488 7870**. For more info on weed management visit our [website](#).

WeedSmart is an industry-led initiative aimed at enhancing on-farm practices and promoting the long-term sustainability of herbicide use in Australian agriculture. Australian research partners, commercial entities, Government, advisers and growers have joined forces to ensure weed management remain at the forefront of global farming practise. Viable herbicide use will help secure the weed control productivity gains made by the current generation of Australian farmers.
